Growth at a Glance

Jose Aleman - May 2026 - 8 posts - May 1-31

Jose, pay attention here.

141,259 impressions from 8 May posts. One RevOps credibility post created the biggest spike, but the strongest next-month signal is the repeat pattern: specific RevOps pain, hard numbers, and tactical operating advice.

0.70% ENGAGEMENT RATE

8 posts - 3,102 total followers - May 1-31 tracking

Post Impressions, May 2026

All posts reviewed - selected report posts highlighted

One post carried the month

The May 7 RevOps Director post generated about 80.8% of monthly impressions. June cannot rely on one spike; the goal is two or three posts with similar clarity.

The pattern is clear

Jose wins when he turns RevOps pain into executive language: credibility, forecasting, compensation, operating discipline and revenue architecture.

Audience + Demographics

Jose Aleman - who May reached

The audience skewed toward people who understand RevOps, GTM systems, sales leadership and operating discipline. This is not a broad creator audience; it is a business-operator audience.

Top industries

Seniority signal

Strategic read

Jose is reaching the right professional layer: senior operators, directors, VPs and CXO profiles. The next step is to convert this silent audience into visible proof by building posts that invite operators to add their own examples.

Post-by-Post Breakdown I

Jose Aleman - analytics + screenshot data

BREAKOUT May 7 (Thu) REVOPS PAIN "A Director of RevOps recently was asked to share..." Runaway winner. Direct RevOps pressure plus a share-worthy framing made this the month's distribution engine.	114K imp 0.59% rate 674 eng deep signal
TOP POST May 18 (Mon) CATEGORY POV "RevOps as a role was dying because it was too available..." Role anxiety worked because the post named the concierge trap and gave RevOps a higher-status identity.	6.9K imp 1.61% rate 111 eng career signal
TOP POST May 5 (Mon) MARKET DATA "174,000 job postings. A 300% surge in VP titles..." Hard numbers made the RevOps career shift feel external and urgent, not just Jose's opinion.	3.0K imp 1.31% rate 39 eng market signal

Post-by-Post Breakdown II

Jose Aleman - selected supporting posts

May 25 (Sun) FORECASTING "If your forecast is missing by 20% every quarter..." Lower reach, but strong utility. The post moved from tool criticism into operating guardrails.	1.1K imp 2.75% rate 29 eng save signal
May 14 (Wed) ANALOGY "My recent full-body health checkup showed..." The personal-health analogy made system diagnosis easier to understand and gave the account more range.	2.1K imp 2.61% rate 54 eng human signal

Why only five posts are shown

All May posts were reviewed. These five are the ones that teach us the most: distribution, audience quality, proof comments, tactical value, and repeatable June strategy.

Comment Intelligence

Readable LinkedIn proof with ICP context

Why we picked this comment

Andy Mowat is a 4x unicorn executive profile and a senior GTM operator. We picked this because his comment moved the post from RevOps frustration into CEO-level operating leverage: when RevOps has executive support, companies move faster. That is direct ICP validation.

May 7 - Andy Mowat thread

Andy Mowat is a 4x unicorn executive profile and a senior GTM operator. We picked this because his comment moved the post from RevOps frustration into CEO-level operating leverage: when RevOps has executive support, companies move faster. That is direct ICP validation.

Comment Intelligence

Readable LinkedIn proof with ICP context

Why we picked this comment

Pranav is a GTM Strategy and RevOps leader. We picked this because he translated Jose's point into a revenue-outcome rule: every RevOps request should tie back to revenue, pipeline, forecast or rep productivity. That is exactly the operator audience Jose wants to influence.

May 18 - Pranav B. operator validation

Pranav is a GTM Strategy and RevOps leader. We picked this because he translated Jose's point into a revenue-outcome rule: every RevOps request should tie back to revenue, pipeline, forecast or rep productivity. That is exactly the operator audience Jose wants to influence.

Why we picked this comment

Josh Blandy is a VP / GM / Head of Revenue Operations profile. Najmuzzaman Mohammad is a YC S26 founder building AI agents. We picked this thread because it shows both sides of Jose's ICP responding: RevOps leaders and software founders connecting the argument to monetization, comp design and GTM operating systems.

The screenshot shows a LinkedIn interface with a comment thread. At the top is the LinkedIn logo and a search bar. Below that is a navigation bar with icons for home, network, jobs, messages, notifications, and profile. The main content area shows a comment thread. The first comment is from Josh Blandy, a VP / GM / Head of Revenue Operations, who says: "100% Jose. There's a couple of additions to consider. The first is Revenue Architecture is a critical interface between product and sales. It can be disastrous when product build changes to product monetisation and the GTM motion is not in sync with them. Comp design plays a major role in practically changing the GTM motion, a.k.a. The business model.... more". The second comment is from Najmuzzaman Mohammad, a YC S26 founder, who says: "That second split is so real. Smartest teams I see want an actual architect who can move systems and incentives, not just dashboards. The jump in pay is wild but feels kind of overdue. You either get invited to the exec table or you're 10 steps behind." Below the comments is a promoted advertisement for Google Workspace, which says: "Transform your work Try Google Workspace at no cost for 14 days. Get started today. Arnab & 69 other connections also follow Google Workspace".

Wins, Notes, and the June Plan

Jose Aleman - built from May data

What Clicked This Month

RevOps pain travels

The May 7 post worked because it named a real internal credibility problem.

Numbers build authority

174,000 postings and a 300% title surge made the RevOps shift concrete.

Operators added substance

Andy, Josh, Pranav and Najmuzzaman did not just react. They expanded the argument.

Tactical posts get saved

Forecasting, comp plans and CRM hygiene are the reusable advice lanes.

Jose, We Need to Talk

One post created most of the month.

That is good news and a risk. The May 7 topic should become a repeatable series, not a one-off spike.

For June, sharpen specialist posts.

Forecasting and compensation posts are strong, but they need first lines that connect the topic to CEO/CRO consequences.

June: The Game Plan

1

Build the RevOps credibility series.

Use the May 7 post as the theme: value, trust, reporting lines and executive confidence.

2

Use one hard number every week.

Market data, forecast variance, comp math, sales-cycle shifts or revenue impact.

3

Turn comments into content.

Andy, Josh, Pranav and Najmuzzaman already gave June angles. Use those as market intelligence.
